

EnzActive^{MIX}

A UNIQUE COMBINATION of live *Saccharomyces cerevisiae* yeast and a mixture of six enzymes coated with a layer of inactive yeast cells.

EnzActive MIX is an effective formula combining probiotic and enzymatic action.

PRODUCT COMPOSITION:

- live *Saccharomyces cerevisiae* yeast with a yeast cell count of $\geq 1.5 \times 10^{10}$ CFU/g

- combination of six enzymes:
- protease - α -amylase
- cellulose - β -glucanase
- xylanase - phytase

PROBIOTIC ACTION:

- 1 Restoration and normalisation of the gastrointestinal microflora.
- 2 Prevention of proliferation of pathogenic microorganisms and their impact on the body.
- 3 Improvements in the structure of the villi of intestinal epithelium.
- 4 Increase digestion efficiency.
- 5 Stimulation of the body's barrier system and strengthened immunity in animals and poultry.
- 6 Normalisation of the enzymatic synthesis process in the digestive tract.

ENZYMATIC ACTION:

- 1 Conversion of fibre into glucose.
- 2 Breakdown of proteins into amino acids.
- 3 Hydrolysis of xylan to xylose.
- 4 Breakdown of starch into simple sugars.
- 5 Breakdown of glucans and cellulose contained in grain raw materials through the cleavage of hydrolytic bonds.
- 6 Release of phosphorus available in phytates.

RECOMMENDED DOSAGES AND USE

POULTRY

Add to balanced compound feed throughout the growing period (from the beginning to the end) in the below doses:

100 – 150* g per t of broiler chicken feed

50 – 100* g per t of laying chicken feed

CATTLE

Add to compound feed in a dose of:

5 – 10* g per head per day

SWINE

Add to compound feed in the below doses:

500 * g per t of piglet feed

300 – 200 * g per t of pig fattening feed

300 * g per t of lactating sow feed

200 * g per t of gestating sow feed

*The above recommended dosages should be adjusted with reference to the physiological condition, age, and diet of animals and poultry. Continuous, unlimited access to water
