

EnzActive PRO

A unique combination of probiotic
and prebiotic activities

to balance gut microflora
and improve resistance

PRODUCT COMPOSITION

- Yeasts of the genus *Saccharomyces*, *Torulopsis bovina*, *Aspergillus oryzae*
- Beta Glucans from *Saccharomyces cerevisiae*
- Mannans from *Saccharomyces cerevisiae*

SYNERGISTIC MECHANISM OF ACTION OF THE ENZACTIVE PRO CONSTITUENTS :

1 BALANCE OF GUT MICROFLORA

2 IMPROVED RESISTANCE

- Reduction of pathogenic pressure
- Antitoxic action
- Immunomodulation
- Antioxidant effect
- Immune response stimulation

EFFICIENCY

POULTRY	CATTLE	SWINE
Reduction of pathogenic bacteria and diarrhea risk		
Reduction of the feed conversion	Improved feed digestion and assimilation	Reduced feed conversion
Significant improvement in weight gain	Reduction the effect of heat stress on the body	Higher average daily gains
Increase of poultry safety	Higher average daily gains, higher milk yields	Control of pH level
Improvement of egg quality and weight	Improved quality of products	Improved immune system functionality
Improved immune system functionality	Maintenance of optimum pH level	Reduced effects of pathogens and toxins
Reduced effects of pathogens and toxins	Improved immune system functionality	Reduction of sow immunosuppression
Resistance to oxidative stress	Reduced effects of pathogens and toxins	Prevention of MMA syndrome
	Acceleration of early rumen development	Resistance to oxidative stress

THE METHOD OF FEEDING

Add to compound feed in a dose of:

0.3 - 1 * kg per t

*The above recommended dosages should be adjusted with reference to the physiological condition, age, and diet of animals and poultry.
Continuous, unlimited access to water is needed.
